

# Deliverable 2

## **PART A : THE APPLICATION**

Using PHPMYADMIN or something similar for MySQL, you will create a minimum of 5 tables having a minimum of 5 -8 rows of data/table.

This web application needs to offer the user options to :

- Add a record
- Edit a record
- Update a record
- Delete a record
- Search for records

You will show your understanding of SQL commands by embedding at least 4 commands which show your knowledge of nesting, joins, case, formatting and/or string manipulation etc.

## **PART B : THE REPORT**

The report will be structured as follows:

- Introduction
- Overview of DB (i.e. purpose – relate back to the ERD)
- SQL queries - outline where there is complexity (in your opinion) and why these queries are relevant to the users of your system. Explain the queries
- Using the system i.e. screen images of the main functionality (like a user manual)

ALSO :

A link (if necessary) with username and password
